PATIENT OUTCOMES

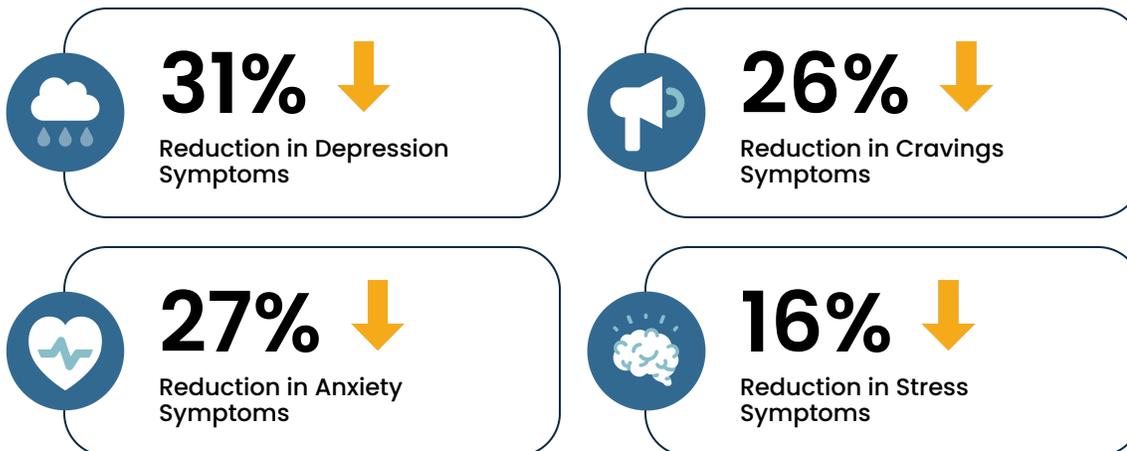

Research from (SAMSHA) has found that treating substance use disorder and mental health is correlated with improved quality of life for patients and increased chance for a successful recovery from substance use and mental health disorders.

Key Findings:

Patients were shown to have reductions in symptoms related to depression, anxiety, stress, and cravings of primary drug choice.

(Patients were measured using PHQ-9, PSS, GAD-7, and Cravings Scale)

TOTAL PATIENT AVERAGE (N = 114)

HOLISTIC HEXAGON OUTCOMES

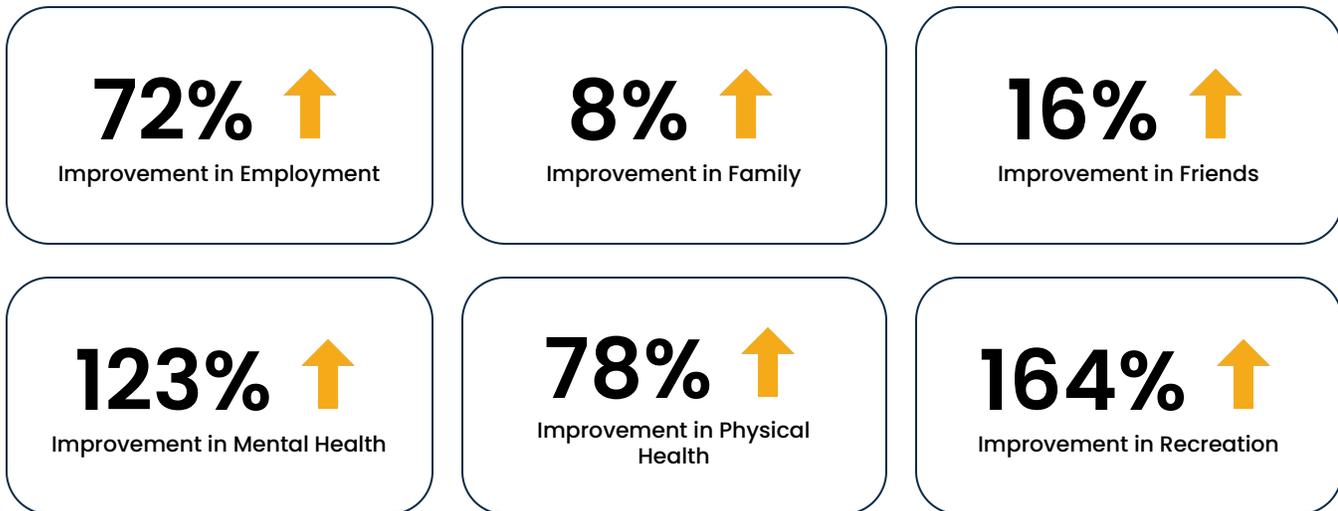

The Holistic Hexagon is a 1-10 satisfaction scale that is administered weekly to determine a patient's overall quality of life. The categories measured are Family, Friends, Recreation, Mental Health, Physical Health and Employment.

Quality of life (QoL) is increasingly recognized as central to recovery in patients with substance use disorders (SUD).

Patients reported the following improvements:

- **Employment:** 72.29% improvement in satisfaction with the current occupational situation.
- **Family:** 8.02% improvement in satisfaction with the current family situation.
- **Friends:** 15.69% improvement in satisfaction with the current friends situation.
- **Mental Health:** 122.84% improvement in satisfaction with the current mental health situation.
- **Physical Health:** 77.95% improvement in satisfaction with the current physical health situation.
- **Recreation:** 163.93% improvement in satisfaction with the current recreational situation.

TOTAL PATIENT AVERAGE (N = 114)

Key Findings:

These findings suggest that the personalized care and programming offered at Acqua Recovery significantly improve overall patient Quality of Life (QoL).

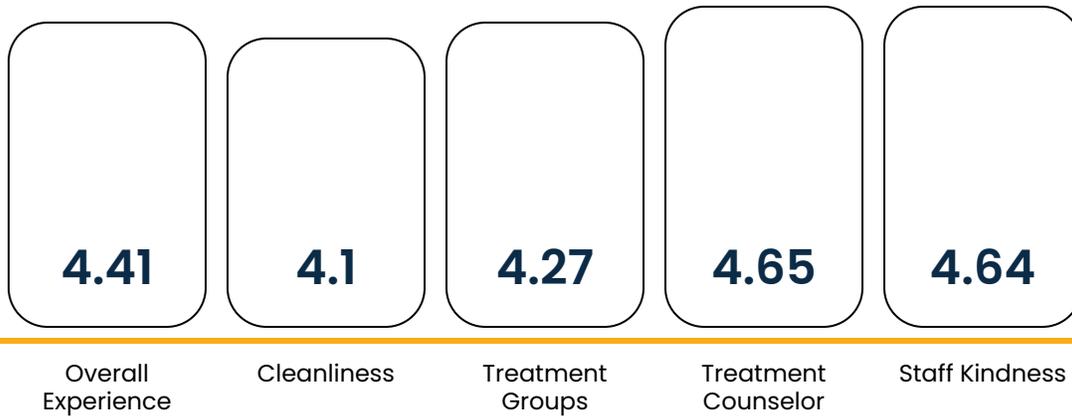

PATIENT SATISFACTION

According to the National Institute of Health (NIH)² patient satisfaction is an important and commonly used indicator for measuring the quality of health care. Patient satisfaction affects the clinical outcomes as well as patient retention.

The patient satisfaction survey is rated on a 1-5 scale (1-Extremely Dissatisfied, 5- Extremely Satisfied). The categories measured are: Cleanliness of Facility, Treatment Groups, Treatment Counselors and Staff Kindness.

Report Range: 11 Month Average

Key Findings:

The findings suggest that Acqua Recovery environment, clinical services and staff professionalism offer a patient experience that is conducive to long-term recovery.

Facility Average:
